2024

THE BEST OF IMPLANTOLOGY

A full day of learning, 5 world-class experts, and one amazing Caribbean capital: Welcome to AB Dental's Dominican Republic Symposium.

An opportunity for dental professionals from across the Spanish-speaking world to learn about the latest technologies and techniques in prosthetics, oral implantology, and dental surgery – as well as network, soak up sun, and explore the fascinating city of Santo Domingo.

FASCINATING LECTURES

● 08:30-09:00 | **Registration**

● 09:00-09:15 | **Opening Remarks:**

AB Dental Latin America director, Mr. Avi Bensimon.

● 09:15-10:00 |

DR. RICARDO NAVES:

Optimization of the surgical site and maxillary sinus elevation through Osseodensification

This Lecture will explore novel approaches to bone treatment, departing from traditional methods that merely cut bone without optimizing the surgical site. By embracing innovative techniques, we can enhance both the quality and quantity of available bone, leading to minimized complexity in surgical procedures like large volume grafts or traumatic sinus lifts. Ultimately, these advancements enable faster patient rehabilitation through accelerated implant osseointegration.

● 10:00-10:45 |

DR. ALAN RENÉ:

e-PRF – Extended Platelet-rich Fibrin

Utilizing extended-PRF (e-PRF) membranes as a substitute for collagen barrier membranes in clinical applications such as guided tissue/bone regeneration.

● 10:45-11:15 |

Coffee break

• 11:15-12:00 |

DR. GREGORIO BLANCO:

Full Arch Rehabilitations on Subperiosteal Plates, Complete and Partial

Case diagnosis and planning, subperiosteal plate design, plate placement procedure and PRGF use, and scanning for measurements and subsequent immediate load placement.

• 12:00-12:45 |

DR. CARLOS LLAMAS:

Sinus Floor Elevation (Sinus Lift) and Its Complications

Sinus floor elevation is a common surgical procedure requiring extra bone for superior posterior implant placement. This lecture will review key considerations, pathologies, and complications.

• 13:00-14:30 |

Lunch break

• 14:30-15:15 |

DR. JOSE MARCANO:

CO₂ Laser-Assisted Implant Placement and Management

The cleanest, most effective, and least invasive and traumatic method for soft tissue management before and after placement of an AB implant. Discover use cases, techniques, and more.

• 15:15-16:00 |

DR. RICARDO NAVES:

Immediate implants in a compromised socket in the anterior sector and Osteodensification

The installation of immediate implants in the anterior sector is a complex technique but one that gives us many biological benefits. In this conference we will give guidelines not only to immediately install an implant, but also so that you can install them immediately in sockets with compromised buccal bone table and unfavorable gingival conditions, achieving a final aesthetic of excellence.

16:00-16:15 |  **Coffee break**

16:15-17:00 |

DR. CARLOS LLAMAS:

“Khoury technique” (Osseus blocks)

Khoury technique consists of obtaining thin sheets of autologous bone from the patient's mandibular external oblique line, which we will use as a wall to regenerate the lost bone walls.

17:00-17:45 |

DR. ALAN RENÉ:

Immediate Implant Placement Bone Graft Less only PRF

Effect of grafting only with PRF membranesthe gap (SG) between the implant surface and alveolar socket on hard and soft tissue changes following single immediate implant placement

17:45-18:00 | **Q&A panel**

20:00

DINNER IN A LOCAL RESTAURANT & PARTY

AMAZING SANTO DOMINGO

The vibrant capital of the Dominican Republic combines Caribbean beaches and sunshine with a truly cosmopolitan urbanism.

Explore the cobblestoned streets of the historical Zona Colonial district, a UNESCO World Heritage site.

Take your pick from dozens of museums. Dazzle your senses at the casinos, restaurants, and nightclubs of the Malecón waterfront promenade.

And get your pulse in rhythm to the Latin sounds of merengue, bachata, and salsa.

DON'T MISS OUT
